CHAPTER 1

INTRODUCTION

1.1. PROJECT OVERVIEW

Personal assistance App is meant to aid the forgetful and busy with remembering to take their daily medications. It is designed for users who need a little help keeping track of their medication schedule and who are dedicated to keeping the schedule.

It is difficult for doctors/caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed. A personal assistance app will help you to take medications in a particular time.

Personal assistance applications will ask users to add the medicine names and time based upon their prescription, reminder will be updated which will be visible to the user. Also, users can get a voice commands to take their medications. They have an option to set an alarm which will notify them to take medications, they can either stop or snooze the alarm as per their need.

1.2. PURPOSE

Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine He / She should take at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed.

An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the IBM Cloudant DB. If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform. The device will receive the medicine name and notify the user with voice commands.

CHAPTER 2

LITERATURE SURVEY

2.1. EXISTING PROBLEM

1. Older adults often prefer to stay in their homes rather than enter a healthcare Institution. Although in own-home assistance might appear as the better solution to elderly people, it may require efforts from informal caregivers such as family members, friends, neighbours, and volunteers hardly compatible with the family and social lifestyle.
2. There is a possibility that the screening process, the analysis and interpretation of the them was influenced by the author's own perceptions or understanding of the topic.
3. This system can be improved, providing a more flexible way to schedule medicines consumption alarms such as twice a week, three times a week, every other day, among others.
4. To improve the proposed system, closing the dispenser compartments so that they only open when the camera detects the face of the caregiver who must place the medicine boxes in them .This would make it safer. It would also be good for the system to automatically detect which medicines and how many of them the caregiver has put in the different compartments; currently ,he/she is who must provide these data through the mobile app.

2.2. REFERENCES

2.3.PROBLEM STATEMENT DEFINITION

Personal assistance App is meant to aid the forgetful and busy with remembering to take their daily medications. It is designed for users who need a little help keeping track of their medication schedule and who are dedicated to keeping the schedule.

Sometimes elderly people forget to take their medicine at the correct time. They also forget which medicine He / She should take at that particular time. And it is difficult for doctors/caretakers to monitor the patients around the clock. To avoid this problem, this medicine reminder system is developed.

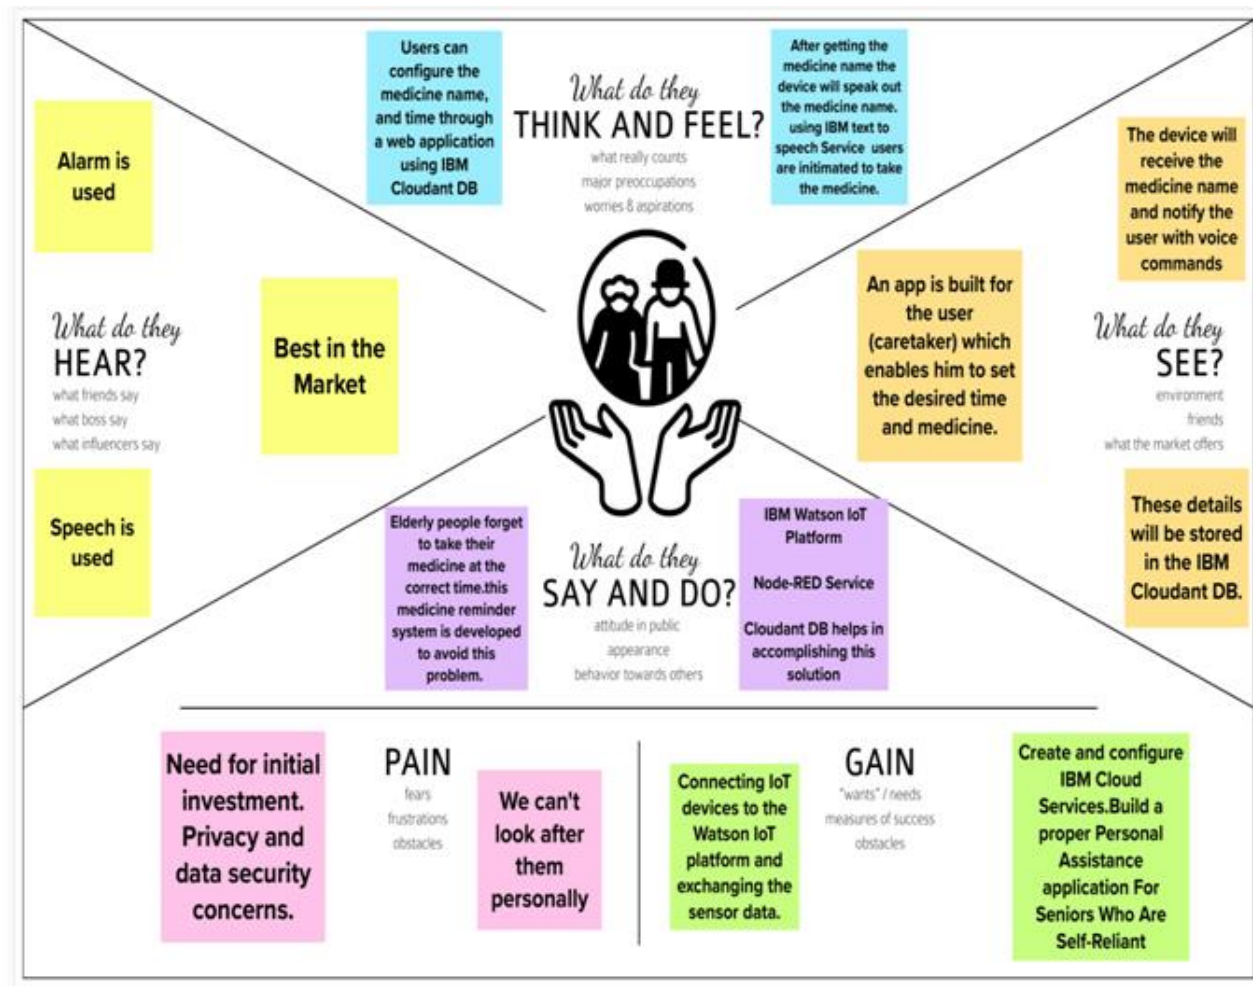

An app is built for the user (caretaker) which enables him to set the desired time and medicine. These details will be stored in the IBM Cloudant DB.If the medicine time arrives the web application will send the medicine name to the IoT Device through the IBM IoT platform.The device will receive the medicine name and notify the user with voice commands.

CHAPTER 3

IDEATION & PROPOSED SOLUTION

3.1. EMPATHY MAP CANVAS

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviors and attitudes. It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

3.2. IDEATION & BRAINSTROMING

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 🕒 10 minutes to prepare
- 🕒 1 hour to collaborate
- 👤 2-4 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

- 1 Team gathering**
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.
- 2 Set the goal**
Think about the problem you'll be focusing on solving in the brainstorming session.
- 3 Learn how to use the facilitation tools**
Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#)

1 Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM

Sometimes elderly people forget to take their medicine at the correct time they also forget which medicine he or she should take at the particular time. And it is difficult for doctors and care takers to monitor the patience around the clock. To avoid this problem this medicine reminder system is developed.

Key rules of brainstorming

To run a smooth and productive session

🗣️ Stay in topic.	💡 Encourage wild ideas.
🙅 Defer judgment.	👂 Listen to others.
🗣️ Go for volume.	👁️ If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

TIP

You can select a sticky note and move it around to group it with other notes. You can also select a sticky note and move it around to group it with other notes.

ABIRAMI.R

User friendly application

Keep a track of user medical appointments or medical regiments

Managing and tracking medical schedule of the elderly people

Keep a track of best acclaimed hospitals ,pharmacies and clinics in their area.

ANUSHREE.A

Checking for harmful drug interactions

Limited usage of drug dosage

Designed in favour of senior citizens

Accurate measuring for the time

CHETANAPPRIYA.K.L

Keep track of the medicine stocks

Set reminders for appointments

Set reminders for taking medication

Locate nearby hospitals ,clinics or pharmacies

AISWARYA.S.G

It's focuses on people who forget to take medicines on time

Medication reminders help in decreasing wrong dosage

Proper medications can be notified using the prescriptions in correct time

User will not miss any medications due to bad memory and any other related factors

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

TIP

Add content to the top of each note to make it easier to find, track, update, and categorize important items as they come within your mind.

CATEGORY-1

Proper medications can be notified using the prescriptions in correct time

Accurate measuring for the time

Designed in favour of senior citizens

Keep a track of best acclaimed hospitals ,pharmacies and clinics in their area.

Keep a track of user medical appointments or medical regiments

CATEGORY-2

It's focuses on people who forget to take medicines on time

Limited usage of drug dosage

User friendly application

Managing and tracking medical schedule of the elderly people

Locate nearby hospitals ,clinics or pharmacies

CATEGORY-3

Medication reminders help in decreasing wrong dosage

User will not miss any medications due to bad memory and any other related factors

Checking for harmful drug interactions

Set reminders for taking medication

Set reminders for appointments

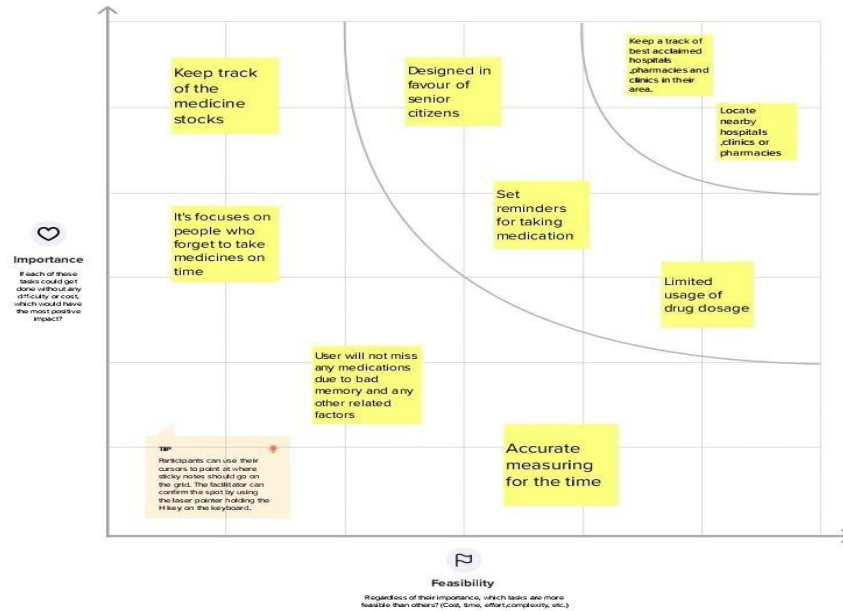

Step-3: Idea Prioritization

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

20 minutes

→

After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

Quick add-ons

- A Share the mural**
Share a view link to the mural with stakeholders to keep them in the loop about the outcomes of the session.
- B Export the mural**
Export a copy of the mural as a PNG or PDF to attach to emails, include in slides, or save in your drive.

Keep moving forward

- Strategy blueprint**
Define the components of a new idea or strategy.
[Open the template →](#)
- Customer experience journey map**
Understand customer needs, motivations, and obstacles for an experience.
[Open the template →](#)
- Strengths, weaknesses, opportunities & threat**
Identify strengths, weaknesses, opportunities, and threats (SWOT) to develop a plan.
[Open the template →](#)

[Share template feedback](#)

3.3. PROPOSED SOLUTION

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Some people find it difficult to learn new apps in this ever-expanding digital environment, and people nowadays tend to forget things more easily, such as taking their prescriptions. People need a way to remember to take their prescriptions without having to learn how to use sophisticated programs.
2.	Idea / Solution description	Create a basic, easy-to-use app so that users don't forget their medicine schedules, can easily discover pharmacies and clinics near them, and can be directed through the app by their loved ones if necessary.
3.	Novelty / Uniqueness	My research began with a series of inquiries directed at a variety of people in order to have a better understanding of their issues and demands in remembering their routines. The purpose of this study was to gain a better understanding of individuals and their needs, as well as to put them at the centre of our design process and product.
4.	Social Impact / Customer Satisfaction	I constructed these proto-personas, or names, based on the research findings from the user interview. They would be crucial to the rest of the design process. All design decisions may be assessed and re-evaluated using these personas, keeping the user and their perspective in mind.

3.4. PROBLEM SOLUTION FIT

Define CS, fit into CL	1. CUSTOMER SEGMENT(S) CS <p>Older aged people, who have difficulty with such daily activity, often end up in hospital or nursing homes, spending a disproportionately large amount of money just to take care of their aged beloved people in taking their daily medicines on time. This application has to be installed in each and every house in which self reliant aged people live.</p>	6. CUSTOMER LIMITATIONS CL <small>EG. BUDGET, DEVICES</small> <p>This application is not so expensive .Once the application is installed and the data bases are provided it will perform its work at the fullest .Aged people will feel more comfortable in taking the daily medicines on time without failing and without relying on others personal help .</p>	5. AVAILABLE SOLUTIONS AS <small>PLUSSES & MINUSES</small> <p>Even though there are more various ways and methods to take care of the age peoples this application makes an alarm and reminds the user to take medicine by a sending a voice message.</p>	Explore AS, differentiate
	Focus on PR, tap into BE, understand RC	2. PROBLEMS / PAINS + ITS FREQUENCY PR <p>The application provides a database which consist username, name of the medicine and the time in which the medicine has to be taken, once the database along with the data sets are provided the application is known ready to use .The installation of the system is easier way.</p>	9. PROBLEM ROOT / CAUSE RC <p>The main root cause of identifying this application is the emerging old aged homes in which people leave their elderly people because they can no longer take care of them anymore. This application surely reduces percentage of sending aged people to old age homes.</p>	
Identify strong TR & EM		3. TRIGGERS TO ACT TR <p>In a population of 100 percentage, there are nearly 79 percentage of seniors out of them in which 40 percentage of senior people are self reliant. In such case, this application if installed in one house, the neighbourhood people will see that the self reliant people are stressfree and enjoying their life with this application.</p> <p>If there is also senior people who are self reliant in their house means, surely they will get triggered to install this application in their house.</p>	10. YOUR SOLUTION SL <p>An intervention called CAPABLE - for Community Aging in Place, Advancing Better Living for Elders involves home visits with an occupational therapists, a registered nurse, and a handyman to work together with older adults to identify mobility and self care issues in their homes and fix or modify them. As a part of this, by making small adjustments, from installing such application systems, it helps the client remember to take medicines at the proper time each and every day.</p>	8. CHANNELS of BEHAVIOR CH <p>OFFLINE: In offline mode it remembers the user with an specified alarm which even remembers the user that it's time to take the medicine .To avoid the confusion on which medicine has to be taken in that particular specific type, the application even alarms with the name of the medicines too</p> <p>ONLINE: It can neither be used in online or either in offline too. it is a double mode operating system. Which is designed to be a user friendly.</p>

CHAPTER 4

REQUIREMENT ANALYSIS

4.1. FUNTIONAL REQUIREMENT

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through G-mail Registration by phone number
FR-2	User Confirmation	Confirmation via Email Confirmation through SMS/Messages
FR-3	User Login (Web)	Login with registered mail id and password
FR-4	User Login (mobile app)	Login with registered mobile number and password
FR-5	User's Medical Information	In the app,enter your medicine details with date. Then set the time in the app.
FR-6	User input management	All the user's data are got with the help of a text field in the dashboard in the app.

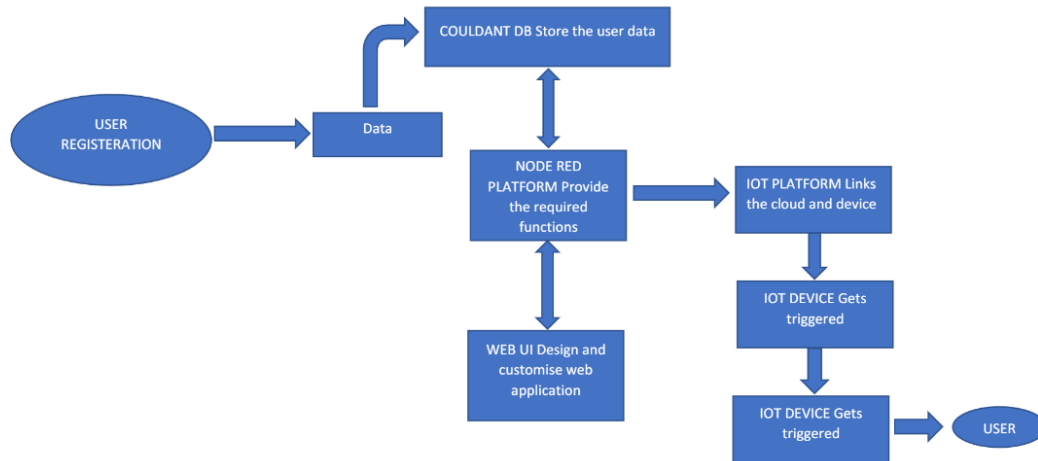

4.2. NON-FUNCTIONAL REQUIREMENTS

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The system should be user-friendly for the users. It is used to remind the medicine names. It alerts the users through voice commands.
NFR-2	Security	The login information should not be accessed byany other users than the respective. The data of the users should be kept confidential.
NFR-3	Reliability	It reminds on correct time The user data should be updated and examined after certain period of time.
NFR-4	Performance	The voice message will be delivered accurately to the given time. It works without any connection interruption
NFR-5	Availability	The system should be monitored 24X7 for the alert of medicines. It can be used by any registered users from any place.
NFR-6	Scalability	It is easily adaptable The device is compatible and portable The application can handle any number of registration

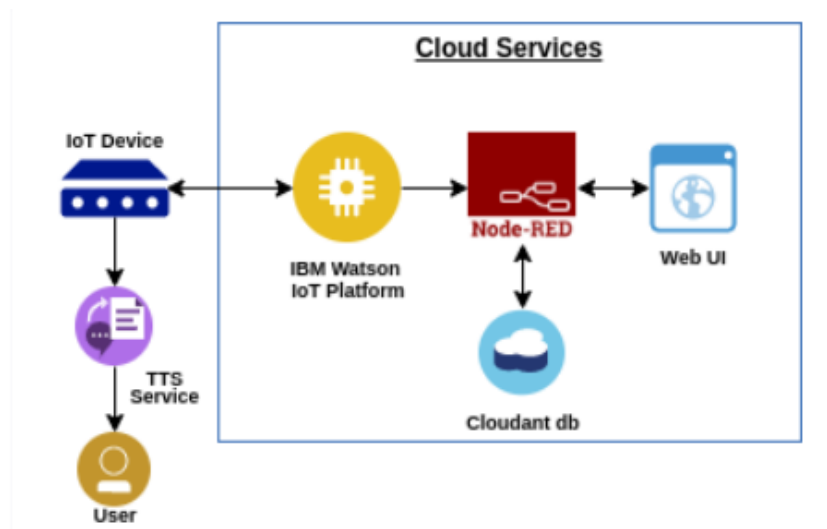

HAPTER 5

PROJECT DESIGN

5.1. DATA FLOW DIAGRAMS

5.2. SOLUTION & TECHNICAL ARCHITECTURE

5.2. USER STORIES

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Senior user)	caretaker	USN-1	As a user, I want to take Medicines on time and monitor my health	I want to take medicines on time	High	Sprint-1
Customer (Diabetes Patient)	Smart medicine box	USN-2	As a user, I want to take Medicines on time and monitor my health	I want to take my tablets on time by voice command	High	Sprint-1
Customer (Thyroid Patient)	Smart medicine box	USN-3	As a user, my patient needs to take medicines on time and monitoring the activity	My patient needs to take medicines on time	Medium	Sprint-2
Customer (Coma Patient)	Caretaker	USN-4	As a user, my patient needs medication time and prescription should load in database for upcoming week	My patient medication time and prescription should be in database list	Low	Sprint-4
Customer (Disabled People's)	Smart medicinebox	USN-5	As a user ,i need to take my medicine in nearby places with light notification	I need to take my medicine in nearby places with light notification	Medium	Sprint-3

CHAPTER 6

PROJECT PLANNING & SCHEDULING

6.1. SPRINT PLANNING & ESTIMATION

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story points	Priority	Team Members
Sprint 1	Set Alarm	USN-1	As a user, I can set an alarm for alerting to take medicine through Medicine remainder system.	10	High	Anushree A
Sprint 1		USN-2	As a user, I can Activate and Deactivate the alarm	10	High	Abirami R
Sprint 2	Voice Assistant	USN-3	As a user once I set the alarm it will alert us voice assistant.	10	High	Chetanappriya KL
Sprint 2		USN-4	It will tell us the time and name of the medicine once the time has set.	10	High	Aiswarya SG
Sprint 3	Cloudant DB	USN-6	For storing the details of medicine reminder for which Cloud DB is used	5	low	Anushree A, Chetanappriya KL, Aiswarya SG, Abirami R
Sprint 3		USN-7	As a user, I can store the name of the medicine with timing.	10	High	Abirami R, Anushree A, Chetanappriya KL, Aiswarya SG
Sprint 4	User Friendly Application	USN-8	Our app will be a companion for the senior citizen to consume the medicines on time.	5	Low	Abirami R, Anushree A, Chetanappriya KL, Aiswarya SG
		USN-9	As a user, one need to set the medicine and time as per the instruction given by the user the voice assistant will help to take medicines on time for senior citizens.	10	High	Anushree A, Abirami R, Chetanappriya KL, Aiswarya SG

6.2. SPRINT DELIVERY SCHEDULE

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint 1	20	8 days	02-11-2022	09-11-2022	20	8-11-2022
Sprint 2	10	8 days	05-11-2022	12-11-2022	10	11-11-2022
Sprint 3	20	8 days	07-11-2022	14-11-2022	20	23-11-2022
Sprint 4	10	8 days	10-11-2022	17-11-2022	10	30-11-2022

WEB USER INTERFACE:

The screenshot shows a web browser window with the address bar displaying a URL. The page has a blue header with the text "Home". Below the header, there is a form titled "Medicine_remainder". The form contains three input fields: "Enter medicine name: *", "Time: *", and "Date: *". Below these fields are two buttons: "SUBMIT" and "CANCEL".

APPLICATION:

The screenshot shows the mobile application interface. At the top, the status bar displays the time 10:54, signal strength, 4G+ network, and 3% battery. The app title "Medicine remainder" is at the top. Below the title is an illustration of a person holding a calendar. The form contains the following fields and buttons:

- Enter medicine name**: A text input field containing "dolo".
- Enter time : (H : M)**: Two numeric input fields containing "22" and "55".
- Enter date : (d : m : y)**: Three numeric input fields containing "17", "11", and "2011". The "2011" field is highlighted with an orange border.
- Set remainder**: A black button with white text.

The screenshot shows the mobile application interface with a notification overlay. The notification is titled "Clock" and displays the text "dolo" and "Fri 11:33 AM". Below the notification are two buttons: "Snooze" and "Dismiss". The background shows the same form as the previous screenshot, but the "Set remainder" button is now black with white text.

- Voice commands are also been generated. (The generation of voice command is attached in the demo link).

CHAPTER 8

TESTING

8.1. TEST CASES

S.No	MEDICINE NAME	TIME (H:M)	Expected output	Actual Output
1	Dolo	11:20	Alarm is set	Alarm is set
2	Flucold	12:00	Alarm is set	Alarm is set
3	Wikoryl	23:54	Alarm is set	Alarm is set
4	vicks	1:20	Alarm is set	Alarm is set

8.2. USER ACCEPTANCE TESTING

- The web application will be served to the user for setting reminder.
- The user can set alarm or reminder by running the application.
- Based on the medicine name and time entered in the app , an alarm is set and a voice command is played at the entered time.

CHAPTER 9

RESULTS

9.1. PERFORMANCE METRICS

The accuracy of the app is 96.5 %.

CHAPTER 10

ADVANTAGES AND DISADVANTAGES

ADVANTAGES:

- Receiving reminders to take medications.
- Alarm is set at particular time as per the user requirement.
- Voice commands are received at particular time to take medications.
- No need of internet connection.
- Customer satisfaction.

DISADVANTAGES:

- Possibility of run time problem when user enters two medicines at the same time.
- The need for training in the operation of the new program.

CHAPTER 11

CONCLUSION

The objective of this project was to design and develop a simple, reliable, efficient, and medicine remainder system that has a precise and quick notification mechanism.

Appropriate services were used to make reminder alarm and voice commands .A step-by-step approach was followed in the design of the system. The design was carried out based on the study and analysis of existing similar systems and user perceptions. A prototype of the system was implemented and tested in home and office environments. Several tests were conducted, and the results were analysed to ensure that the system produced the intended results. The system has been implemented and tested, showing satisfactory performance.

CHAPTER 12

FUTURE SCOPE

- Users:
Single point user to multi point user.
- Health info:
The application helps family members to keep track of the medicines.
- Alert message:
If the medicines are out of stock it will give an alert message to the user.
- Chat with caretaker:
Consultation can be taken online.
- Buy medicines:
We can order medicines through nearby pharmacy
